Being and Learning Eduardo M. Duarte 2012-10-17 "Education is not an art of putting sight into the eye that can already see, but one of turning the eye towards the proper gaze of Being. That's what must be managed!" Plato insists. This claim is the take-off point for Eduardo Duarte's meditations on the metaphysics and ontology of teaching and learning. In *Being and Learning* he offers an account of learning as an attunement with Being's dynamic presencing and unconcealment, which Duarte explores as the capacity to respond and attend to the matter that stands before us, or, in Arendtian terms, to love the world, and to be with others in this world. This book of 'poetic thinking' is a chronicle of Duarte's ongoing exploration of the question of Being, a philosophical journey that has been guided primarily through a conversation with Heidegger, and which also includes the voices of Plato, Aristotle, Heraclitus, Nietzsche, as well Lao Tzu and the Buddha, among others. In *Being and Learning*, Duarte undertakes a 'phenomenology of the original': a writing that consciously and conspicuously interrupts the discursive field of work in philosophy of education. As the late Reiner Schurmann described this method: "it recalls the ancient beginnings and it anticipates a new beginning, the possible rise of a new economy among things, words and actions." *Being and Learning* is a work of parrhesia: a composition of free thought that disrupts the conventional practice of philosophy of education, and thereby open up gaps and spaces of possibility in the arrangement of words, concepts, and ideas in the field. With this work Eduardo Duarte is initiating new pathways of thinking about education.

Education's Epistemology Harvey Siegel 2017-10-02 *Education's Epistemology* extends and further defends Harvey Siegel's "reasons conception" of critical thinking. It

analyzes and emphasizes both the epistemic quality, and the dispositions and character traits that constitute the "critical spirit," that are central to a proper account of critical thinking; argues that that epistemic quality must be understood ultimately in terms of epistemic rationality; defends a conception of rationality that involves both rules and judgment; and argues that critical thinking has normative value over and above its instrumental tie to truth. Siegel also argues, contrary to currently popular multiculturalist thought, for both transcultural and universal philosophical ideals, including those of multiculturalism and of critical thinking themselves.

Susan Haack: Reintegrating Philosophy Julia F. Göhner 2016-02-26 This volume documents the 17th Münster Lectures in Philosophy with Susan Haack, the prominent contemporary philosopher. It contains an original, programmatic article by Haack on her overall philosophical approach, entitled 'The Fragmentation of Philosophy, the Road to Reintegration'. In addition, the volume includes seven papers on various aspects of Haack's philosophical work as well as her replies to the papers. Susan Haack has deeply influenced many of the debates in contemporary philosophy. In her vivid and accessible way, she has made ground-breaking contributions covering a wide range of topics, from logic, metaphysics and epistemology, to pragmatism and the philosophy of science and law. In her work, Haack has always been very sensitive in detecting subtle differences. The distinctions she has introduced reveal what lies at the core of philosophical controversies, and show the problems that exist with established views. In order to resolve these problems, Haack has developed some 'middle-course approaches'. One example of this is her famous 'Foundherentism', a theory of justification that includes elements from both the rival theories of Foundationalism and Coherentism. Haack herself has offered the best description of her work calling herself a 'passionate moderate'.

Philosophy of Education Nel Noddings 2018-04-17 The first edition of Nel Noddings' *Philosophy of Education* was acclaimed as the 'best overview in the field' by the

journal *Teaching Philosophy* and predicted to 'become the standard textbook in philosophy of education' by *Educational Theory*. This classic text, originally designed to give the education student a comprehensive look at philosophical thought in relation to teaching, learning, research, and educational policy, has now been updated to reflect the most current thinking in the field. A revised chapter on Logic and Critical Thinking makes the topic more accessible to students and examines how critical thinking plays a role in light of the new Common Core standards. *Philosophy of Education* introduces students to the evolution of educational thought, from the founding fathers to contemporary theorists, with consideration of both analytic and continental traditions. This is an essential text not only for teachers and future teachers, but also for anyone needing a survey of contemporary trends in philosophy of education.

Axel Honneth Christopher Zurn 2015-04-22 With his insightful and wide-ranging theory of recognition, Axel Honneth has decisively reshaped the Frankfurt School tradition of critical social theory. Combining insights from philosophy, sociology, psychology, history, political economy, and cultural critique, Honneth's work proposes nothing less than an account of the moral infrastructure of human sociality and its relation to the perils and promise of contemporary social life. This book provides an accessible overview of Honneth's main contributions across a variety of fields, assessing the strengths and weaknesses of his thought. Christopher Zurn clearly explains Honneth's multi-faceted theory of recognition and its relation to diverse topics: individual identity, morality, activist movements, progress, social pathologies, capitalism, justice, freedom, and critique. In so doing, he places Honneth's theory in a broad intellectual context, encompassing classic social theorists such as Kant, Hegel, Marx, Freud, Dewey, Adorno and Habermas, as well as contemporary trends in social theory and political philosophy. Treating the full range of Honneth's corpus, including his major new work on social freedom and democratic ethical life, this book is the most up-to-date guide available. Axel Honneth will be invaluable to students and scholars working across the humanities and social sciences, as well as anyone seeking a clear guide to the work of one of the most influential theorists writing today.

Unopened Books Jermaine D. Gassaway 2017-05-27 The unfathomable rate of Black males in education should result in a national call to action. Across the country Black males represent only 2% of the teaching workforce. By the year 2024, minority students will be the majority, yet our current education workforce does not reflect this growing trend in what has been called "The Browning of America." Why is it acceptable that a student can matriculate from Kindergarten through twelfth grade and not have one Black male as his or her teacher? Why has it been a challenge to recruit and in many instances retain Black males in the classroom? *Unopened Books* explains what is referenced in the book as the Five Black Male Deterrents in Education. Through the personal narrative of Jermaine D. Gassaway, a native Washingtonian, educator, and school leader; coupled with practical solutions, *Unopened Books* provides insight to multiply the 2%. It is intended to not only be a provocative conversation starter but an actionable approach to increase the number of Black men in the classroom.

Leaders in Philosophy of Education Leonard J. Waks 2014-11-26 In the late 1950s plans were initiated to bring a higher level of professionalism to the training of educational professionals. New projects included introducing contemporary scholarship from the humanities and social sciences into colleges of education to revitalize the education knowledge base. In North America and the United Kingdom, analytical philosophers were recruited to inaugurate a 'new philosophy of education.' Analytical philosophy of education soon spread throughout the English speaking world. By the 1980s this analytical impulse had largely subsided. Philosophers trained in analytical philosophy and their students turned to more ambitious normative pursuits related to problems of social justice and democracy. Meanwhile, feminist philosophers opened up new issues regarding the education of women and the nature of teaching and knowing, and a new wave of pragmatist philosophers turned to issues of educational policy. By the 1990s Anglo-American philosophers of education welcomed a dialogue with counterparts in Western Europe, and the field responded to established trends in European philosophy ranging from critical theory and phenomenology to post-structuralism. New leaders emerged in philosophy of education representing all of these various strands. This volume documents the emergence of contemporary philosophy of education as seen by those spearheading these trends.

Philosophy in Educational Research David Bridges 2016-12-01 This book provides critical and reflective discussions of a wide range of issues arising in education at the interface between philosophy, research, policy and practice. It addresses epistemological questions about the intellectual resources that underpin educational research, explores the relationship between philosophy and educational research, and examines debates about truth and truthfulness in educational research. Furthermore, it looks at issues to do with the relationship between research, practice and policy, and discusses questions about ethics and educational research. Finally, the book delves into the deeply contested area of research quality assessment. The book is based on extensive engagement in empirically based educational research projects and in the institutional and professional management of research, as well as in philosophical work. It clarifies what is at stake in international debates around educational research and teases out the nature of the arguments, and, where argument permits, the

conclusions to which these point. The book discusses these familiar themes using less predictable sources and points of reference, such as: codes of social obligation in contemporary Egypt and New Zealand; the 'Soviet', and the inspiration of the nineteenth-century philosopher, Abai in contemporary Kazakhstan; seventeenth-century France, Pascal, and the disputes between Jesuits and Jansenites; eighteenth-century Italy, Giambattista Vico, and *la scienza nuova*; 'educational magic' in traditional Ethiopia; and ends at a banquet with Socrates and dinner with wine and a conversation-loving Montaigne.

How to Be an Excellent Human: Mysticism, Evolutionary Psychology and the Good Life

Bill Meacham 2013-02-07 How can we live good, fulfilling lives? How can we be happy? These questions have been at the forefront of philosophy ever since Socrates, and this engaging book attempts an answer. It addresses the big questions of life: How should we live our lives? How should we decide how to live our lives? How should we even frame the question in the first place? What is it to be human? What are we like, how do we function? What is our place in universe? How do we fit into the bigger picture? What is the bigger picture, the basic nature of all of reality? The book is exciting and wide-ranging. It is incisive philosophy made accessible to the general reader. The author is equally at home lucidly explaining how mystics make sense when they say that all is one and how evolution has provided us with powerful but fallible mental capacities. The book offers an exhilarating journey with stops along the way to consider consciousness, panpsychism, brain science, quantum physics, how we are like and unlike chimpanzees and bonobos, where morality comes from, how our emotions both guide us and trip us up, how our thinking works, how it sometimes fails and what we can do to fix it. Throughout, it recommends an approach to life that maximizes well-being, leading to the possibility of happiness and abundance for all. The book covers a lot of ground, but it is quite approachable. You can read it straight through as an intellectually exciting story. Or you can dive in anywhere, dipping into chapters that pique your interest. In either case you will have fun reading it, and you will be rewarded with insights and ideas that will stimulate and delight your thinking.

The Knowledge Gap Natalie Wexler 2020-08-04 The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.
